# oUICK START GUIDE 

Easy Badges LLC<br>650 NE Holladay St.<br>Suite 1600<br>Portland, OR 97232<br>(3) 855-436-0527<br>sales@easybadges.com<br>www.easybadges.com

Take all the print supplies out of the box and locate the print ribbon. Open the top of the printer by pressing the small square button. Take the print ribbon out of the plastic packaging, align the two spools with either side of the ribbon cartridge.

Make sure the ribbon is seated like the image below. It's very easy to incorrectly seat the ribbon in reverse, causing the printer to display a blinking red light.

The correct ribbon type should be used for the printer (EZ659592). An incorrect ribbon type may still fit in the ribbon cartridge, but the printer may display a blinking red light error.

Ensure the printer is plugged into the power supply that came with the unit. Using the incorrect power supply can cause insufficient power to be sent to the unit. In some circumstances the board of the printer can break with use of the incorrect power supply.

Do NOT connect the USB until promoted to.

## DRIVER INSTALLATION

Download Driver Files from Easy Badges (https://easybadges.com/ cardholdir-id-solid-210-printer-driver/)

Extract the Zip files from the download. The DDInstall.exe file won't work properly without extracting first. Run DDInstall.exe

Plug the printer into the computer with USB when it prompts you to do so.

AFTER DRIVER INSTALLATION

Download the most recent version of CardholdirID from easybadges.com (https://easybadges. com/product/ cardholdir-idsoftware/)

Follow the onscreen instruction to install CardholdirID ID Design Software

Input your activation code when prompted by CardholdirID, you'll find this printed on the backside of the Cardholdir ID card inside the blue software box.

Refer to the videos on easybadges.com for instructional videos on card design, and database functionality. https:// easybadges.com/ id-card-software/
